

Osceola County, Florida Implements NewVision RecordsNG Public View System

New Canaan, Connecticut – (November 30, 2009) -- NewVision Systems Corporation is pleased to announce the first implementation of the .Net based NewVision RecordsNG Public View System in Osceola County (Kissimmee), Florida. The RecordsNG Public View System is the first implementation of the NewVision RecordsNG (“Next Generation”) suite of products that automates the recording and retrieval of official records by Clerks, Registers and Recorders. Based on the Microsoft .Net platform, the RecordsNG Public View System enables a single user interface for both local and remote internet users. The System also adds a host of features to improve the speed and efficiency of records searching for both the Clerk’s staff and the public.

The new system offers options for basic searches and provides an advanced search capability geared toward professional searchers. The advanced capability enables compound searches that may include multiple names, date ranges and document type restrictions. The .Net based interface also enables searchers to tailor the display of search results – including desired columns, font types and sizes - to their individual needs.

Implementation of the Public View System is the first step in NewVision’s plan to take advantage of the .Net platform with RecordsNG. Osceola County has been using the NewVision Official Records System since January, 2007.

The RecordsNG Public View System may be accessed at: www.osceolaclerk.com. Follow the links to *Recording Division* and *Land Records/Research*.
